Creator's Note:
"With this pack our target was to get a distinctive and recognizable dark fantasy feeling and vibe. The perception of a functional fantasy UI palette always passes through the sense of ''materials'' of the objects, so we recorded a lot of different sources like resonant metal objects, clothes of different fabrics and many liquids contained in several pots and jars. Most of the work has been put towards nailing the acting of the gestures, so that the sounds work with just some layering and basic processing. The effects used range from reverb and multiband compression to frequency shifter, saturation, spectral gating and some more eccentric stuff."
